

Blowout, Breakdown?

Don't risk it, monitor tyres as you drive!

TyrePal continuously measures the pressure and temperature of your tyres - even while you drive.

Correct tyre pressure improves road-holding and reduces stopping distance.

Under-inflation wastes money in fuel and tyre wear and even a slow puncture can cause a blowout.

The monitor displays the pressure of all the tyres and sounds an alarm if your tyres are soft or if you get a puncture. The temperature alert sounds if a tyre gets too hot - giving you advance warning before a blowout.

Sensors on each tyre continuously measure the pressure and temperature of the tyres and transmit the data wirelessly to the monitor. Sensors on each tyre continuously measure the pressure and temperature of the tyres and transmit the data wirelessly to the monitor.

Fitted in minutes

The sensors replace the standard dust caps on your tyres, so all you do is screw them on and lock them in place. Position the monitor in view of the driver and the job's done. You can change the alert thresholds to suit your tyre pressures.

"Brilliant gadget - a great gift!"

"I received an audible warning from the TyrePal. I had felt no problem at all. I pulled onto the hard shoulder and within 30 seconds the tyre was completely flat."

"TyrePal helps me tune the tyres for track performance with my Porsche"
